

## ProsperOps + Microsoft Azure

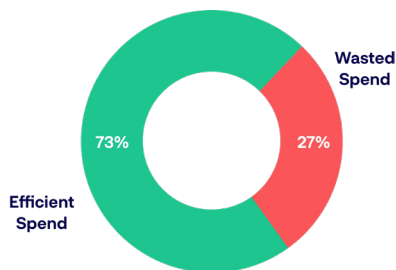

### Autonomous Discount Management (ADM) for Azure Compute

Reduce costs for Virtual Machines, App Service, AKS, and more.

Continuously optimize compute rates via automated Savings Plan and Reservation management without impacting engineering.

### Challenges

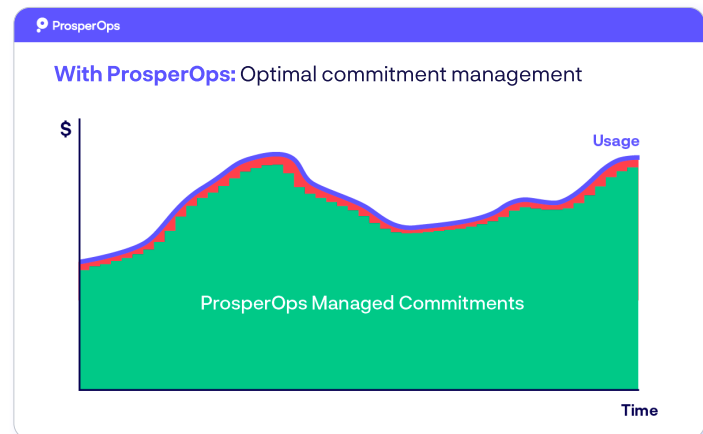

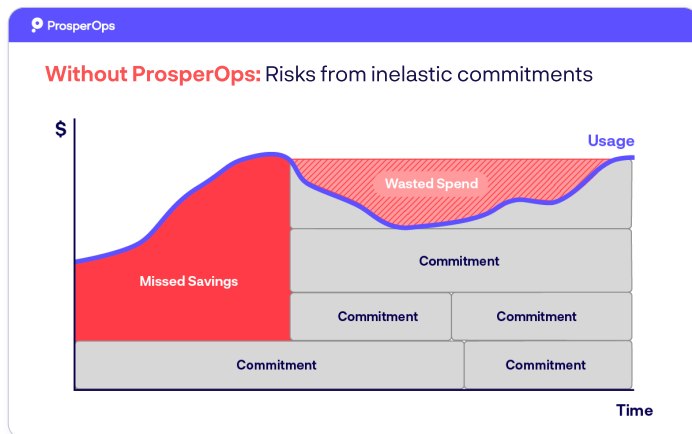

Source: Flexera 2024 State of the Cloud Report

#### Roughly 1/4 of your cloud spend is waste.

Cost visibility tools, while beneficial, do not take action to reduce waste. Achieving optimal outcomes from rate and usage optimizations without automation is impossible.

- ✗ Usage is elastic, but Savings Plans and Reservations are not
- ✗ Managing a dynamic portfolio of discounts is highly complex

Overcoming these challenges requires sophisticated automation that dynamically adapts to usage changes.

### ProsperOps Benefits

#### ✓ Reduce costs and mitigate risk

ProsperOps continuously optimizes a portfolio of Savings Plans and Reservations for compute while taking into account custom pricing in your environment.

#### ✓ Offload commitment management

ProsperOps manages your commitment portfolio, so you can focus on higher-order FinOps initiatives where human decision-making may be more critical.

#### ✓ Understand your outcomes

ProsperOps tracks optimization KPIs and trends, including Effective Savings Rate, spend coverage, savings, commitment burndown, Commitment Lock-In Risk, and more.
