

And this is how it works!

What is PrintPlanet BusinessSolution?

With PrintPlanet BusinessSolution you can order your personalised business stationery or POS materials as required using a personal order portal – naturally in line with your corporate design and adapted to your wishes. For example, edit business cards stored online once without any knowledge of graphic designs or layout programs. Handle correction and approval processes conveniently online with the responsible departments. Compared to the usual order processing through an agency and print shop, this e-procurement solution not only saves you a lot of time that you could use for other tasks, but also a lot of costs.

How does BusinessSolution create savings opportunities?

The process-optimised, demand-based ordering process considerably shortens the individual work steps and long waiting times, effectively saving on costs. Some of the disproportionately time-consuming tasks involved in ordering C-items such as business stationery include communicating with the print shop (proofs, approvals) and collecting orders from around the company so that the work does not have to be repeated on a weekly basis. Another advantage of PrintPlanet BusinessSolution is that stored templates and saved data sets minimise many corporate design, form and spelling errors in the later print result. The administrative workload, e.g. in accounting, is also

reduced. This includes possible collective invoices at the end of the month, a constantly traceable order and delivery history, the optional division according to cost centres as well as the possibility of connection to your purchasing system.

How are products ordered through BusinessSolution?

PrintPlanet BusinessSolution has been designed in such a way that it can be used very intuitively by users of all ages without any special instructions. As a stand-alone programmed solution right from the start, it offers the flexibility needed to meet the requirements of a wide range of customers across all industries. Employees or departments have individu-

al rights and certain articles or functions to choose from through personal login accounts. Whether it's small quantities or large campaign prints, you can have as many pre-designed print products as you like stored in your personal order portal or create them yourself. As a result, you can guarantee that business stationery is created and produced by your employees in compliance with your CD. Once ordered, products remain permanently stored in the system and can be reordered quickly and easily as required. In addition, every order process – be it a business card or a complex flyer – is the same or very similar, so the “learned sequences” also contribute to considerable time savings in the order process for other products. Administrators, i.e. users with additional rights, also have the possibility to get order evaluations in the common formats from BusinessSolution “at the push of a button”, in order to see what has been ordered by the users, in which period, and at what costs. With an optional connection of BusinessSolution to your ERP system through standardised or customised interfaces, you always have an overview of order values and cost centres in your system. Our large product portfolio ranges from classic business cards to stamps, stationery and posters to mugs or mesh banners. But customised product developments are part of our daily business too. Just get in touch with us.

How does the order approval process work?

Purchase orders can be approved within BusinessSolution. After entering the data, the orderer receives a binding print preview to visually check. This preview can be shared with specific people within the system who can then approve it online. This saves you the multiple exchanging of correction releases and the time-consuming sending of data back and forth. Shopping baskets can also be approved for cost control through the system too.

How is production carried out?

We take care of the production and logistics. After receiving your order, we produce, pack and ship it “in-house” on a daily basis. Thanks to our professional on-site production and our long-term cooperation partners, we guarantee the highest quality standards, so that your print products arrive at your door in CD-compliant and colour-fast condition, even in the case of subsequent repeat orders. Even different delivery orders, e.g. to other branches, to offices in homes or spontaneously to your trade fair hotel, can be carried out quickly and easily with our solution.

How is the order shipped?

Your ordered products can be delivered by various shipping partners. Whether it is DHL, UPS or a specific shipping agent – the appropriate shipping method is triggered by the automated shipping logistics to suit the goods. The shipping also always offers tracking through continuously trackable parcels, which can be viewed in your customer account at any time.

How long are the delivery times?

Business cards and other products made in digital offset are usually shipped within 48 hours. In the case of products with an additional finish and offset print products that require more complex production, the production times are somewhat longer and amount to approximately four to six working days. If you have urgent orders that need to be with you or at the trade fair the next day, this can be accomplished by express shipping.

Are international orders also possible?

Since BusinessSolution is accessed online, orders can be placed 24/7 from any location. The system language can also be changed to many different user-specific languages. Standard languages include German, English, French, Dutch, Italian, Spanish, Norwegian, Danish, Polish and Romanian. Postal shipping is available worldwide. As a more economical alternative, printable PDF data can be sent overseas to a print partner of your choice. This saves you shipping costs and the artwork remains CD-compliant.

Which connections are possible (interfaces & purchasing systems)?

We connect BusinessSolution to your ERP system – through basic interfaces or customised solutions. It is also possible to connect it through purchasing systems for supplier control. For example: ariba, eB2B, futurelog, meplato, mercateo, Onventis, OpusCapita, SAP, simplesystem, wallmedien and many more. We adapt flexibly to your requirements.
